Expected Graduation: 2025 Fall
• Majoring in Systems Development
• Relevant modules: Object-Oriented Programming (Java, C#), Databases, Web Development, ASP.NET
• Gained skills in backend and frontend development, software engineering principles, and project management

WORK EXPERIENCE AND PROJECTS

Web Development Intern at a digital agency, Nobel Digital
April 2024 – June 2024

• Built a custom intranet for Kiviõli Chemical Plant with API integration and scheduled cron jobs to automatically sync and display current employee data on the public website.
• Worked closely with project and product managers, to understand the needs of a client, provide possible solutions.
• Completed in-house training to build foundational knowledge of digital products and services, including SEO, Google Analytics, and Google Ads.

Junior Web Developer at a digital agency, Nobel Digital
June 2024 – present
• Developed a large-scale WordPress website for SOL Baltics using Elementor, enhanced with custom code, cron jobs, and API integrations.
• Delivered optimized, scalable web solutions for diverse businesses.
• Maintained and improved existing WordPress sites: added features, fixed bugs, and managed multilingual content with WPML.
• Contributed to major projects (MyFitness, Ariko Reserv, Kone Agro), building custom import tools, implementing WPML-based translations, and modernizing legacy code with a focus on security and maintainability.

Personal Portfolio Website (magnarmarkvart.github.io)
2025

• Designed and deployed a clean, mobile-responsive, interactive portfolio using HTML, CSS, and JavaScript
• Implemented GitHub Pages for static site hosting
• Showcased key projects with descriptions, skills used, and live links.

Internal Business Platform Development
2024

• Designed and developed a custom distributed application for a family-owned business to manage internal operations including data handling, storage, and employee schedules.
• Built with a layered architecture (DAL, BLL, and application control), featuring role-based user management and secure access.
• Designed and integrated a Dockerized PostgreSQL database and configured CI/CD pipelines for automated Azure deployments.
• Developed a server-rendered UI using MVC principles and implemented a dynamic client-side interface with Vue.js.

ADDITIONAL EXPERIENCE

Client Training & Consultation, Nobel Digital
• Led web training sessions for various clients on managing and maintaining their WordPress websites.
• Consulted on multilingual site management using WPML.
• Supported post-launch updates.
